1. Ask blade
   a. Will record
2. If in dataset
   a. What ratchets/assist blades/bits are you using(all separate questions but didnt want to write a lot of stuff in this walk through)(allows 0-4 entries entered one at a time)
      i. Removes all entered values from the list if you remove all the known parts it will say that maybe you should reconsider other combos if you want to use this blade and if you dont want to it will say it cant help but will still allow you to go through with no suggestions
   b. What ratchet do you want to use
      i. Will record
   c. What bit do you want to use(will use abbreviations)
      i. Will record
3. else
   a. Will make you a random combo
4. Spits out combo by doing
   a. Return bladeName + assistBladeName + ratchetType + bitAbriviation
